

# Integrated Management System

## **Eco Monitoring**

Assures compliance with defined environmental criteria in all relevant production steps within the supply chain by auditing, documentation and evaluation of all materials and processes in use.

## **Social Monitoring**

Assures compliance with social, health & safety criteria by pre-assessment, auditing, evaluation and installation of measures to achieve a sustainable development.

## **Quality Monitoring**

Assures compliance with all individual customer's quality requirements, reduction of tests and inspection costs.

## **CSM 2000 Integrated Management System – A global Solution**

- Implementation of a tailored management system guarantees sustainable developments.
- Compliance with national/regional laws and regulations, minimum market and community requirements plus customer demands is assured.
- Compliance with all requirements is audited, analysed, evaluated, monitored and certified.
- A realistic and affordable Compliance System suitable for all industries.
- Installation of CSM 2000 provides a continuous sustainable self assessment in the productive chain.
- The system approach combined with national legislation and minimum requirements assures equal compliance to different buying partners.

**Voluntary validation  
by RWTÜV according to  
CSM 2000-Standard**
